

TRICARE Data Quality Training Course

June 2006

Mr. Martin Shepherd, Manager, Direct Care Data Operations
TRICARE Management Activity (TMA)
Executive Information and Decision Support (EIDS)
United States Department of Defense Military Health System

Who We Are

- MHS centralized data store
- Receive, analyze, process, and store 100+ terabytes of data
- Thousands of users worldwide

Our Mission

- EIDS supports MHS decision-makers by collecting, processing, and managing enterprise data.

Our Vision

- EIDS is the recognized and preferred source of decision-critical data for the MHS.

Transform Data Into Information

Collect

Process

Analyze

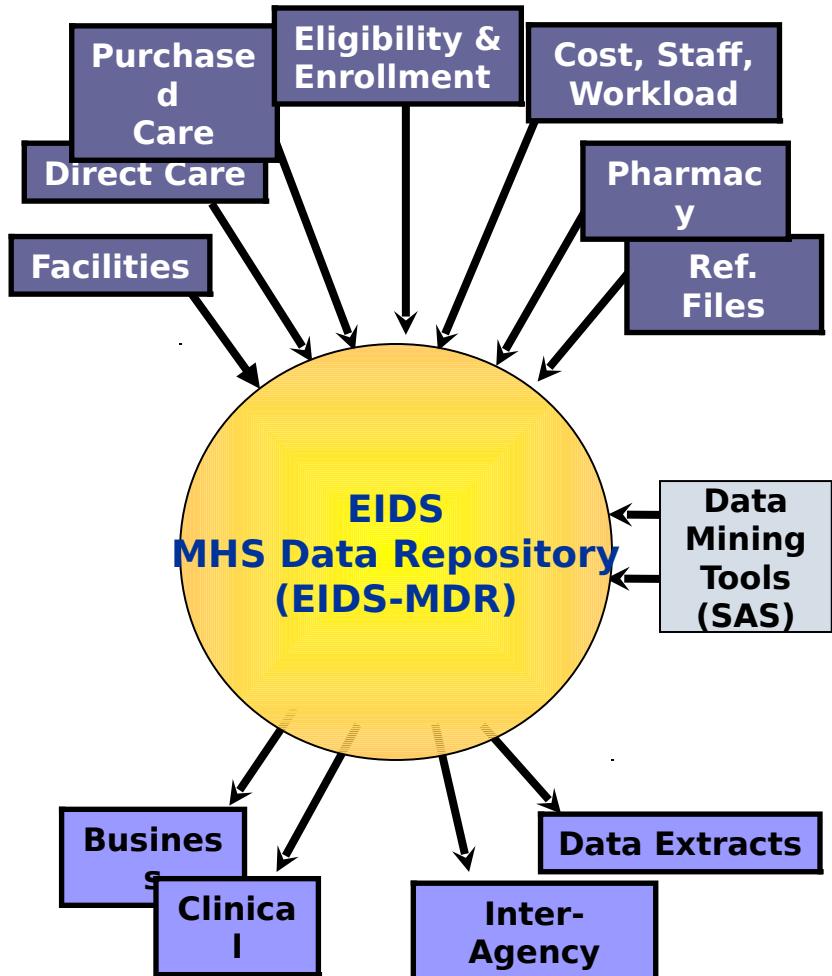

Store

EIDS Users

- **TMA/Health Affairs Staff**
 - Beneficiary Services Representatives & Health Benefits Analysts
- **Military Treatment Facility Executive Staff**
 - Through Offices of the Surgeons General
- **TRICARE Regional Offices**
- **Department of Justice, DoD Criminal Investigative Services**
 - Fraud, Waste, and Abuse

MDR & Data Management

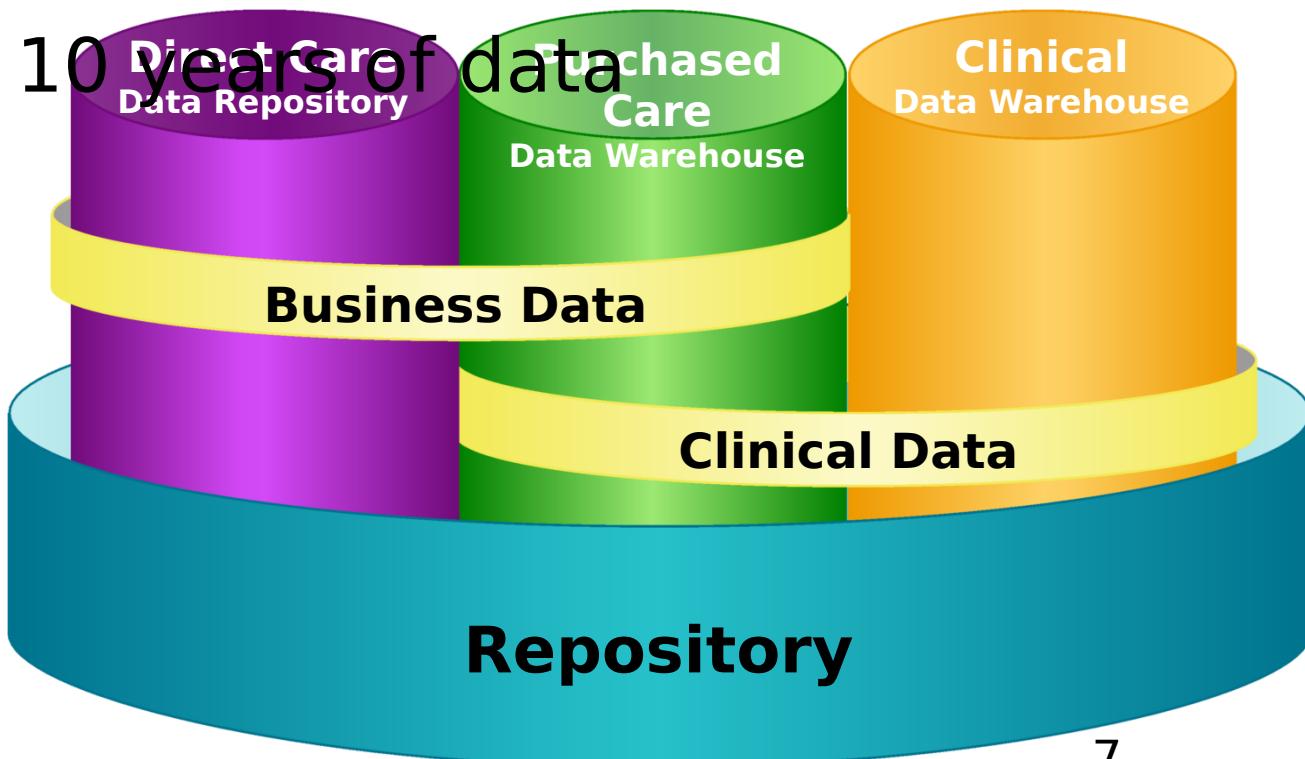

Central repository:

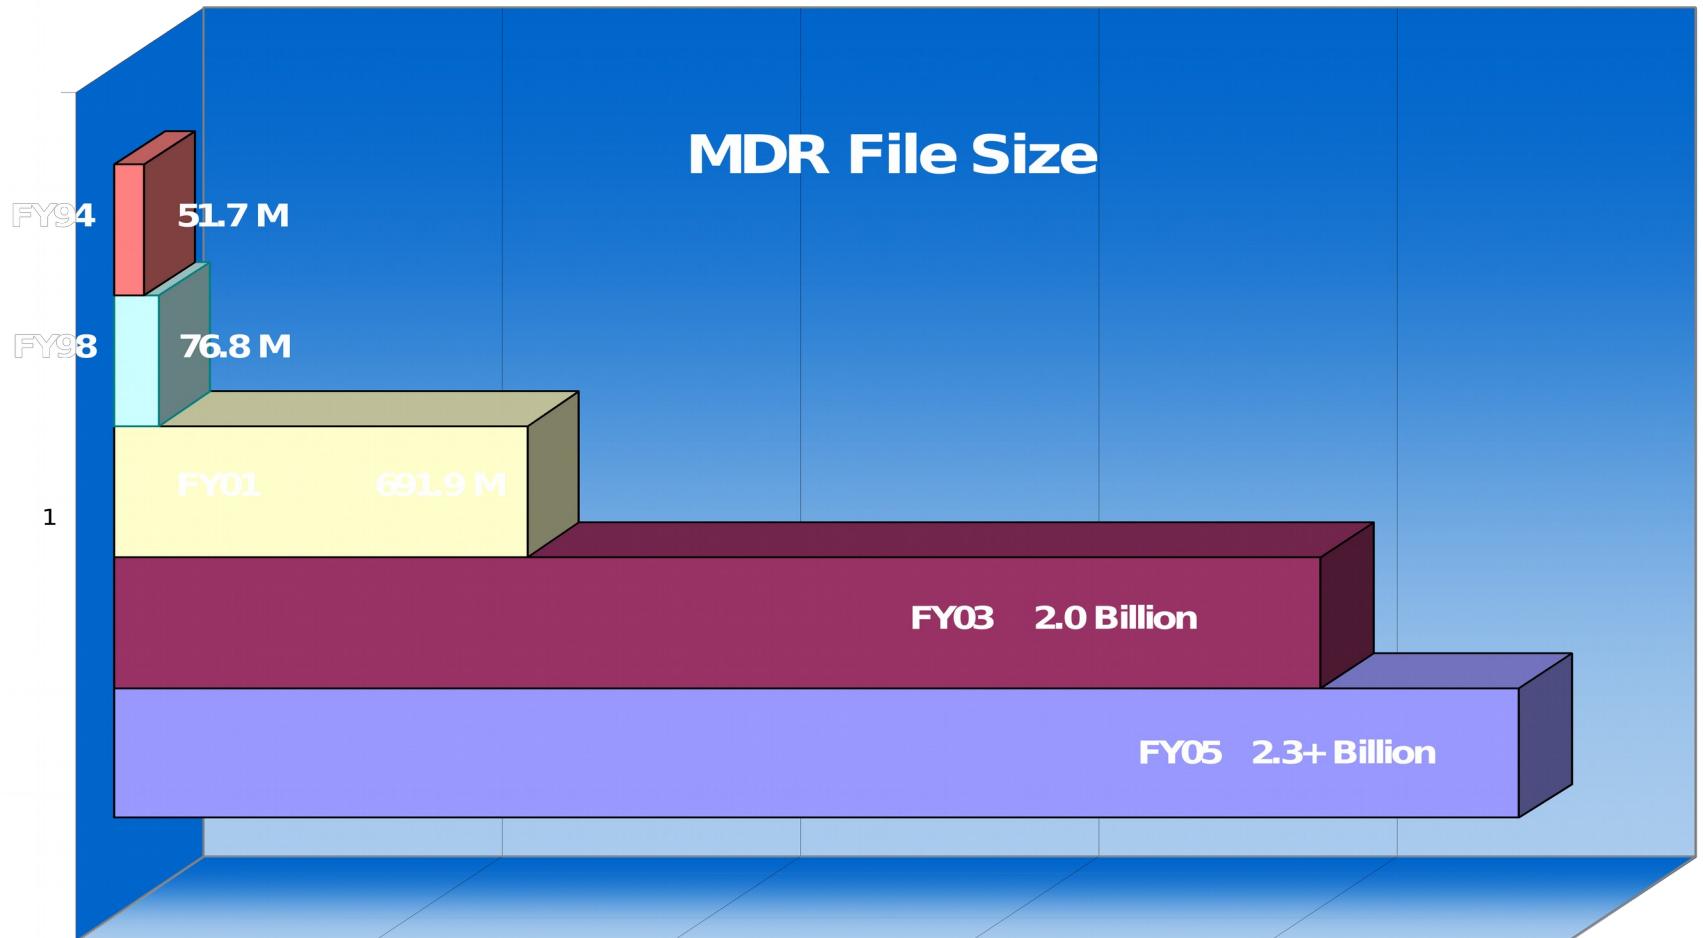

- **MDR migrated to MHS enterprise architecture for decision support**
- **EIDS applying same proven approach to Purchased Care data**

How Much Data?

- More than 1.6 billion records on-line
 - 33 billion records archived
 - 10 years of data

Collect/Process

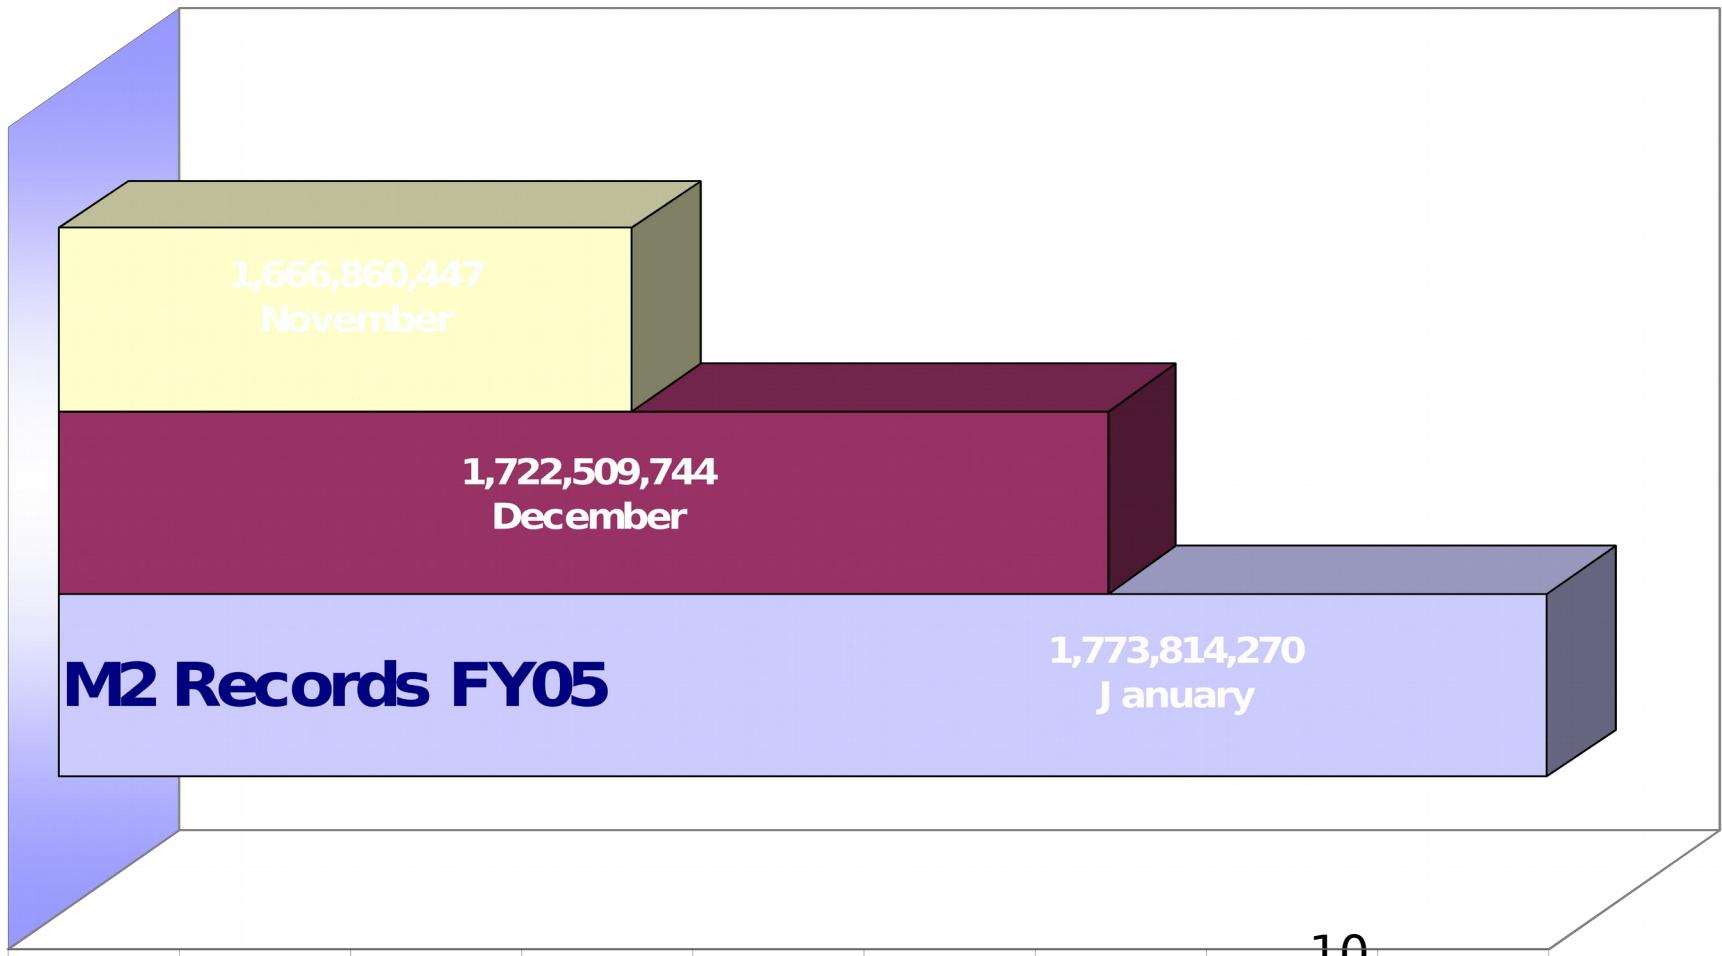

Frequency and Volume of Inbound Data

Data Type	Data Source	Inbound Periodicity	Records/Year (~M)
Population (Eligibility/Enrollment)	DMDC/DEERS	Monthly	160
Health Care Service Record (HCSR) Professional Claims	EIDS-SDCS TMA-Aurora	Daily	102
TRICARE Encounter Data (TED)	EIDS	Daily	177
Pharmacy Data Transaction Service (PDTS)	WebMD	Daily & Weekly	94
Standard Ambulatory Data Record (SADR)	CHCS & ADS Hosts	Daily	30
Standard Inpatient Data Record (SIDR)	CHCS Hosts	Monthly/Bi-weekly	0.32

Distribute

- Minimum 98 million records annually

Distribute

Customer	Data Types	Outbound Frequency
Army, Navy, and Air Force Leadership	SIDR, SADR, Bundled M2 data	Monthly
Defense Medical Surveillance System (DMSS)	HCSR, SIDR, SADR	Monthly (Daily SADRs)
Global Emerging Infection Surveillance (GEIS)	Processed SADR & PDTS data (PHI stripped)	Daily
Deployment Health	SADR Data for Japan and Korea DMIS IDs	Daily
Centers for Disease Control & Prevention (CDC)	Processed SADR data (PHI stripped)	Daily
Naval Environmental Health Center (NEHC)	Processed HL7 data (PHI stripped)	Weekly
Federal Health Information Exchange (FHIE) DVA	Processed HL7 & Separatee SADR & PDTS data	Monthly
WebMD (PDTs & TMOP TED retail)	TED Error Reports & TED reject records (plus tests)	Daily
TRICARE Commercial Partners	TED Error Reports & TED reject records	Daily
Internal Data Marts	Full Data Sets	Daily, Weekly, Monthly

Applications and Components Distribution

Business Marts

Direct Care:

- M2
- MCFAS
- GIS
- Prospective Payment

Purchased Care:

- PCDIS
- PCMIS
- PCURES
- CRDM (15 sub-sys)
- HA/TA
- DCS

Clinical Marts

- **Clinical Data Mart (IOC)**
- **DMSS (Legacy)**
- *Medical Surveillance*
- *Clinical Analysis and Reporting (FOC)*
- *Provider Profiling*

Enterprise Management :

- **MDR**
 - Purchased Care Data Warehouse
 - Business Data Repository
 - Clinical Data Warehouse
- **TED Processing**
 - TED ODS
 - HCSR ODS
 - Feed Node
 - Extraction Transformation Layer
- **SDCS (Legacy)**
 - TED Phase II
 - PEPR 6A
- EIDS Portal
- PEPR Portal
- FHIE/BHIE

How We Manage Data

- Security
- Quality Assurance
- Validity Tests

Management Control Measures

- Product Release (to include data)
 - Multiple gates to assure acceptance by functional proponent
 - Design reviews (URS, PDR & CDR)
 - Testing & data validity checks
 - Each gate requires approval by functional proponent

Security Measures

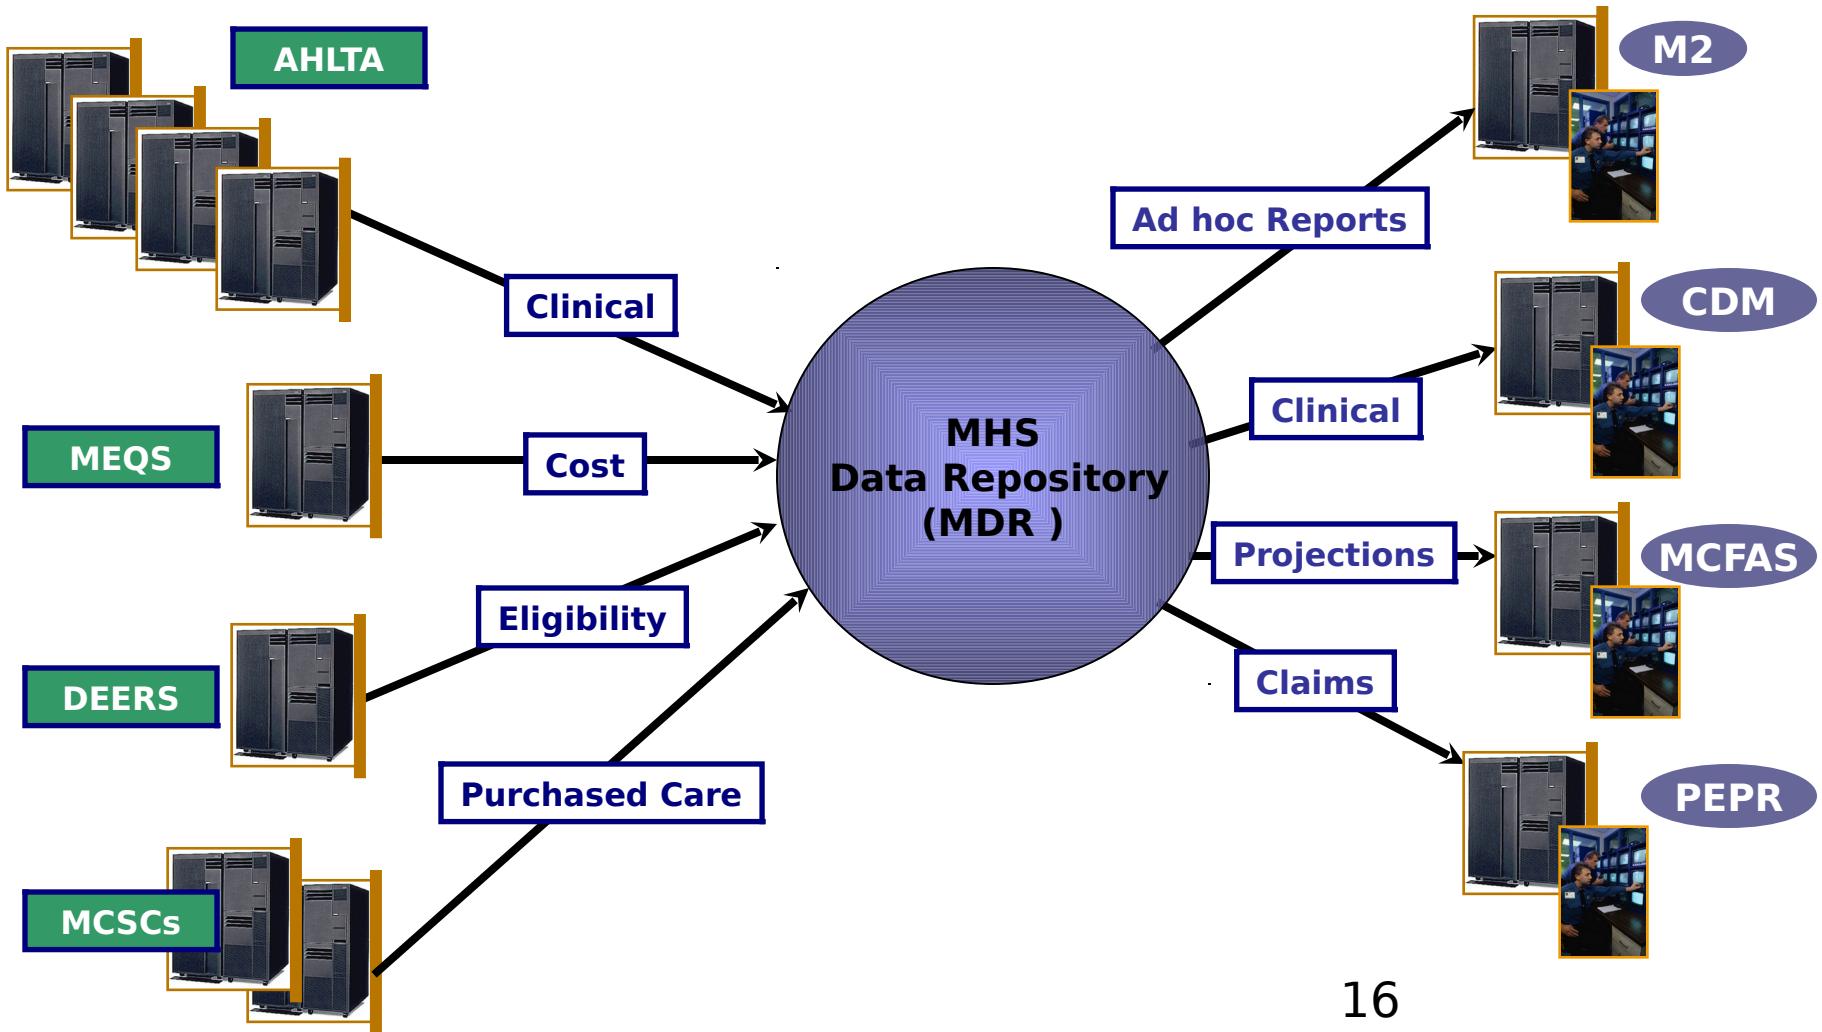

- Information Assurance & Vulnerability Assessment ([IAVA](#)) compliant
- [TMA Privacy](#) Office oversight
- [HIPAA](#) data anonymized based on user need (e.g. role-based access)
- All records [encrypted](#) during distribution
- All data marts [certified](#) before users are permitted access

EIDS Products

SOURCES

REPOSITORY

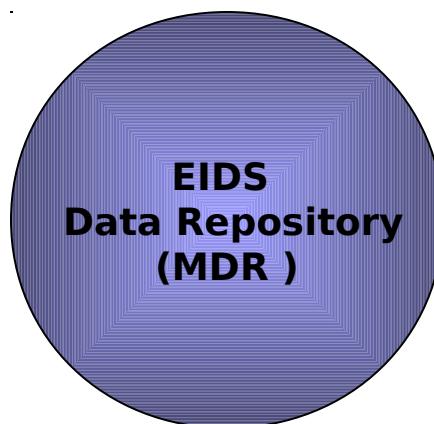

DATA MARTS

MDR

(MHS Data Repository)

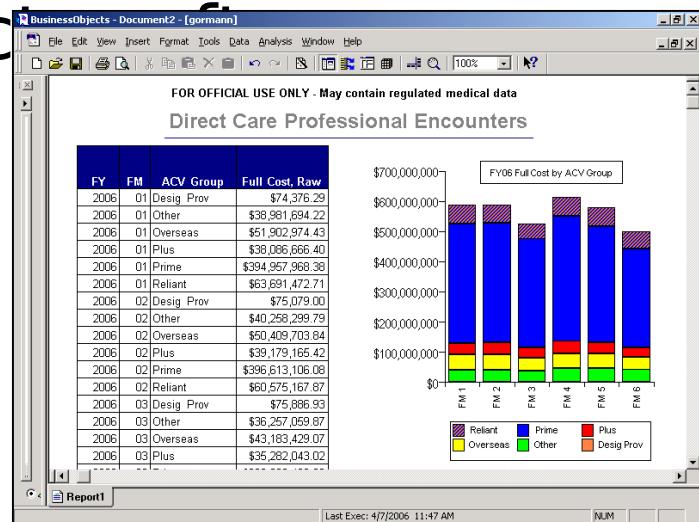

- One-time data capture and validation of MHS data world-wide
- More than 5 billion records on-line consisting of 10+ years of data
- Typical users: small cadre of high-level data analysts

M2

(MHS Management Analysis & Reporting Tool)

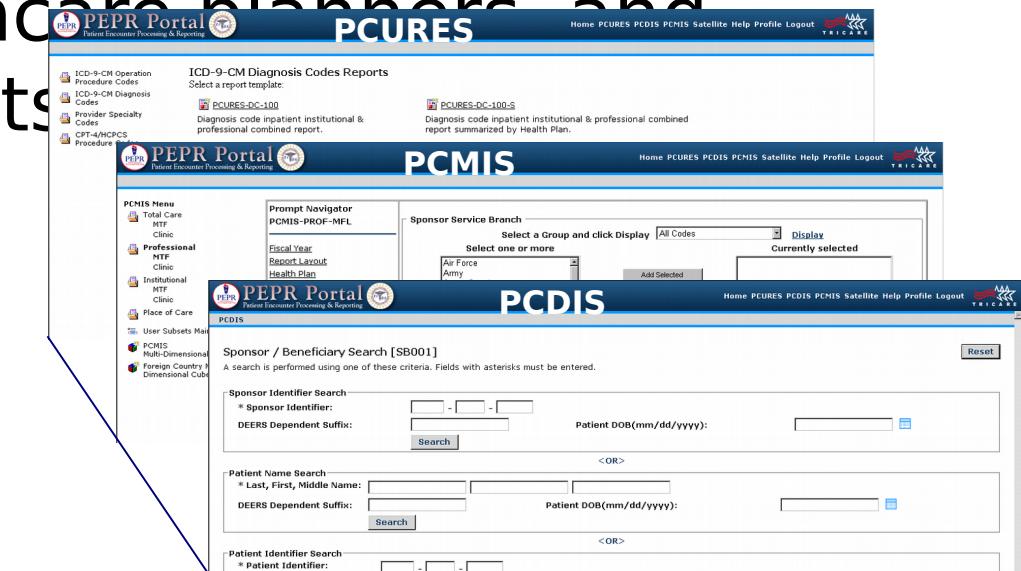

- Complex, powerful ad hoc query tool for detailed trend analysis such as patient and provider profiling
- Typical users: high-level data analysts skilled in Business Objects

PEPR

(Patient Encounter Processing & Reporting)

- Examines TRICARE purchased care claims data through Web-based suite of applications
- Typical users: MHS managed care analysts, healthcare planners, and financial analysts

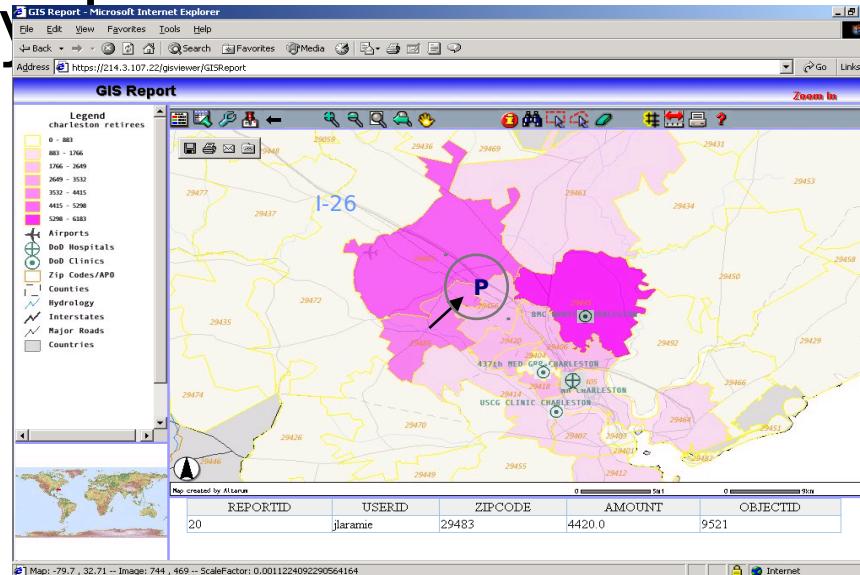

The image displays three screenshots of the PEPR Portal interface, specifically the PCURES, PCMIS, and PCDIS modules. Each screenshot shows a navigation menu on the left and a main reporting or search interface on the right.

- PCURES:** Shows a list of report templates: ICD-9-CM Operation Report Codes, ICD-9-CM Diagnosis Codes, Provider Specialty, and CPT-4/HCPCS Procedure. The 'PCURES-DC-100' report is selected, which is described as a 'Diagnosis code inpatient institutional & professional combined report'.
- PCMIS:** Shows a 'Prompt Navigator' for 'PCMIS-PROF-NFL' with options for Fiscal Year, Report Layout, and Health Plan. It also shows a 'Sponsor Service Branch' search interface where 'Air Force' and 'Army' are selected.
- PCDIS:** Shows a 'Sponsor / Beneficiary Search [SB001]' interface. It includes fields for 'Sponsor Identifier', 'DEERS Dependent Suffix', 'Patient DOB', 'Patient Name Search', 'Patient Identifier Search', and 'Patient Identifier'. A 'Search' button is present in each search section.

MCFAS

(Managed Care Forecasting & Analysis System)

- Forecasts MHS beneficiary populations from worldwide down to individual zip codes
- Typical users: MHS managed care analysts, healthcare planners, resource managers, and financial analysts

Data Quality Examples

Operations Data Quality

Tools Background

(excerpt from FY 99 MDR Document)

- DQ Procedures - Develop and document procedures that implement
 - **Procedures for capturing and cataloguing data files**
- DQ Assessment - Assess the methods to
 - **Monitor data completeness**
- DQ Feed Assessment
 - **Perform Data Feed Quality Assessment...**
- Development of procedures and metrics that
 - **Assess the Data Quality (DQ) of data files received at the Feed Nodes...**
 - **Propose methods for DQ checks**
 - **Develop software to perform DQ checks.**
- DQ Software Development
 - **Develop software that implements the MDR DQ assessments to respective data feeds...**
- DQ Software Implementation
 - **DQ software procedures.....to provide metrics and a management perspective of the DQ in files**

“A thousand miles can lead so many ways...Just to know who is driving what a help it would be”

The Moody Blues

Operations Data Quality Tools

- A “Real Time” DB2 database of key data quality and data completeness elements for:
 - SIDR SADR HL7 PDTS GCPR Appointment Ancillary
- Resides on node 11
- **Database is updated *DAILY*** (DB, in combination with scripting provides “event driven” alerting features)
- **MDR/M2 processing rules applied where appropriate (same as MDR)**
- “Real Time” & “Snapshot” views of key data completeness measures for all DMIS IDs
- Web access and front end for reporting (standard reports)
- Script based alerting (e-mail for critical DQ areas)
- Multi layer data comparisons from Raw to Processed data (procedure-based actions)
- Statistical Process Control (SPC) algorithms & Control Charts to detect data anomalies

Operations Data Quality Tools

THE DATATRAKER IS A “MINI MDR/M2” WHERE EVERYTHING IS PROCESSED IN REAL TIME

- “Data Tracker” tools and reports
 - SIDR and SADR, HL7, **Appointment, Ancillary**, TED Inst/Non-Inst the primary reports provide:
 - File based accounting (e.g. Gap reports)
 - Treatment based accounting (e.g. reports based on care date)
 - Timeliness reporting (e.g. lag from care rendered date to ingest)
 - Other statistical reports including benchmarking against WWR
 - To be fielded: Statistical Process Control Alerting for SADR anomalies
 - Other “Data Tracker” tools and reports
 - Monthly “Hutchinson-like” report (SIDR and SADR vs WWR Benchmarking)
 - Ad Hoc Queries to the “Data Tracker”
 - GCPR & PDTs Gap Reports – Receipt Reports – “Pull Reports”
 - Current reports on the EIDS web site created by the “Data Tracker” for end users.
 - Daily SADR by HOST DMIS (The **“What Was Received Yesterday”** Report)
 - Daily SADR by Treatment ID – 90 Day (The daily **“90 Day Roller”** Report)
 - Monthly SIDR by Tx DMIS
 - Weekly HL7 Gaps

Operations Data Quality Tools

A PARTIAL List of Standard Reports Available from the EIDS Web Enabled “Data Tracker” Database

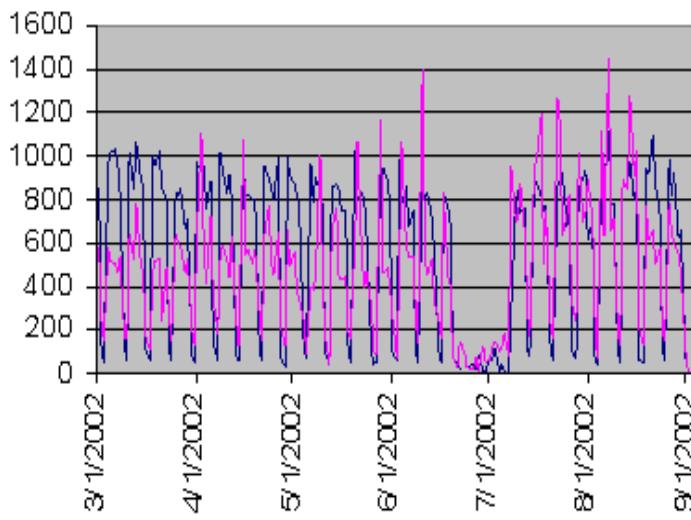

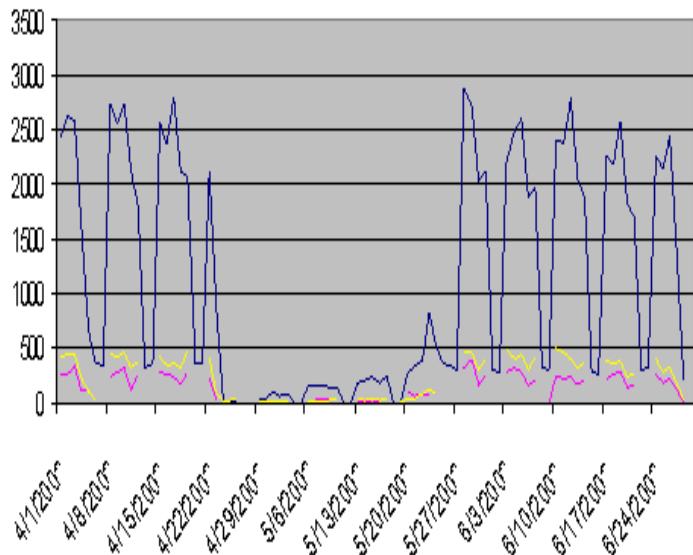

- **HL7 tracking:** Displays a tabular view of file submission history for each HL7 site.
- **SADR gaps:** Displays a list of sites, by ADS version, that did not report data for at least a fixed number of days
- **SADR lags:** Displays the mean and standard deviation of the reporting lag for each site, by ADS version.
- **SADR scores:** Displays a SADR transmission completeness report. For each site, by ADS version, a completion percentage is listed. assumed.
- **SADR tracking:** A tabular view of file and record submission history for each site, by ADS version. Each column corresponds to a file date.
- **SADR treatment DMIS ID gaps:** Displays a list of treatment DMIS IDs that did not report data for at least a fixed number of days.
- **SADR treatment DMIS ID scores:** A SADR transmission completeness report. For each treatment DMIS ID, a completion percentage is listed.
- **SADR treatment DMIS ID tracking:** Displays a tabular view of record submission history for each treatment DMIS ID.
- **SADR treatment DMIS ID (by visit type) tracking:** Displays a tabular view of record submission history for each treatment DMIS ID. The displayed counts indicate the number of unique SADR data records, determined by appointment prefix and appointment identifier number.
- **SIDR gaps:** A list of reporting sites that did not report data for a fixed number of SIDR months, up to and including the ending SIDR month
- **SIDR tracking:** Displays a tabular view of file and record submission history for each reporting site.
- **SIDR treatment DMIS ID tracking:** Displays a tabular view of SIDR completion history for each treatment DMIS ID.
- **GCPR gap:** Displays a list of sites that did not report data for at least a fixed number of days.

Operations Data Quality Tools (cont)

- **GCPR sites:** Displays a list of GCPR sites by Service, region, and DMIS ID, allowing the user to review the mapping of GCPR sites to DMIS IDs.
- **GCPR tracking:** Displays a tabular view of file submission history for each GCPR site. Each column corresponds to a date within the range specified.
- **HL7 gap:** Displays a list of sites that did not report data for at least a fixed number of days, as specified by the user query.
- **PDTS gap:** Displays a line if PDTS data has not been reported for at least a fixed number of days, as specified by the user query.
- **PDTS tracking:** Displays a tabular view of file submission history for PDTS. Each column corresponds to a file date within the range specified.
- **Ancillary Tracking:** Displays a tabular view of file and record submission history for each reporting DMIS ID. Each column corresponds to a file date within the selected range.
- **Ancillary Gap:** Displays a list of reporting DMIS IDs, that did not report data for at least a fixed number of days.
- **Ancillary treatment DMIS ID Tracking:** Displays a tabular view of record submission history for each ancillary performing DMIS ID. Each column corresponds to a service date within the range specified. The displayed counts indicate the number of unique ancillary data records, as determined by the accession number for laboratory, exam number for radiology, and prescription number for pharmacy.
- **Ancillary treatment DMIS ID Gap:** Displays a list of performing DMIS IDs that did not report data for at least a fixed number of days, as specified by days, up to and including the ending service date, as specified.
- **Appointment treatment DMIS ID Tracking:** Displays a tabular view of record submission history for each appointment treatment DMIS ID. Each column corresponds to an appointment date within the inclusive range specified by the beginning appointment date, bgndate, and the ending appointment date, enddate. The displayed counts indicate the number of unique appointment data records, as determined by the appointment identifier number and the node seed name.
- **Appointment treatment DMIS ID Gap:** Displays a list of treatment DMIS IDs that did not report data for at least a fixed number of days, as specified by days, up to and including the ending appointment date, as specified.

Starting with Run Charts

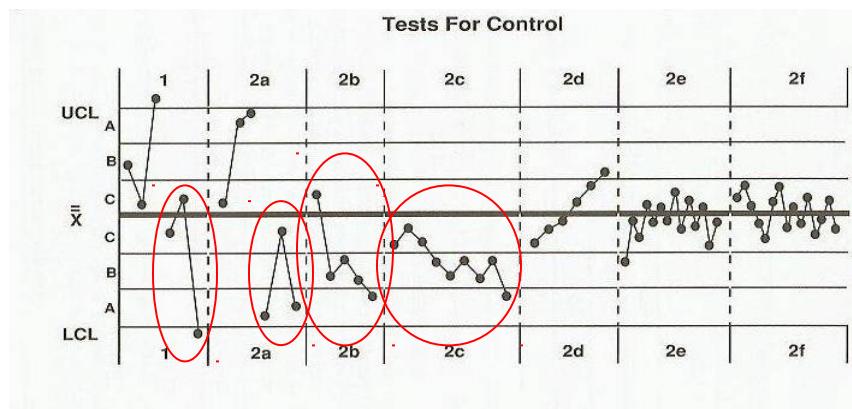

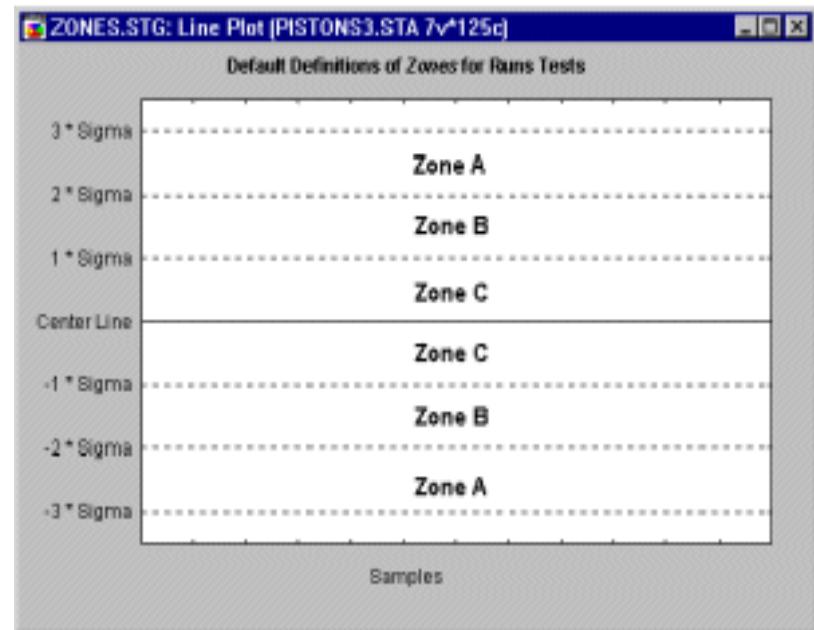

- *Examples of facilities showing gaps in daily outpatient encounter data receipt. Investigation & data recovery actions were required.*

- *Data Set has no correlation with other source system provided data sets*

Data Completeness Determination

- **“Completeness” as a Process Control Problem**
 - Amenable to Statistical Process Control
 - Examine for Special Cause Variation
 - Signals when a problem has occurred
 - Detects variation
 - Allows “Process Characterization”
 - Reduces need for inspection

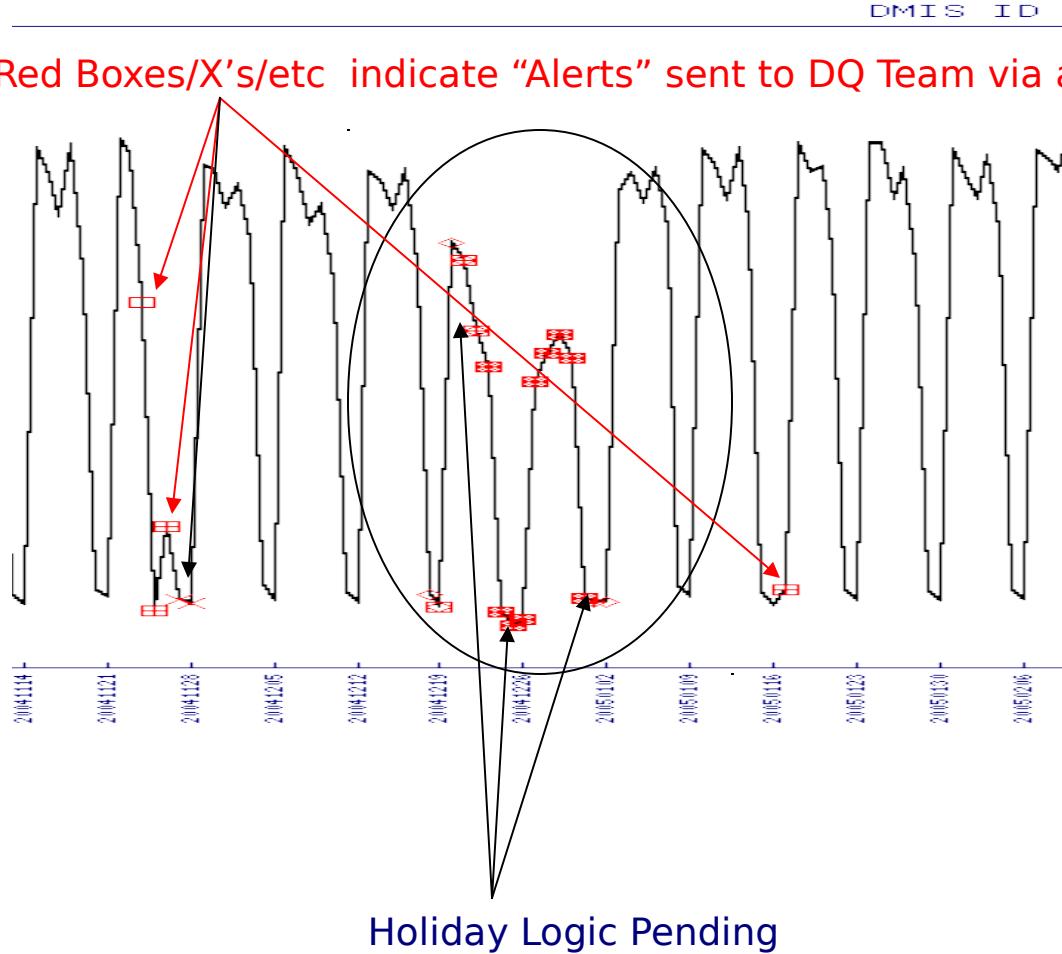

Compare Each Day To Itself

Essentially a projection of previous data forward in time to today, then a comparison of this projection with the newly arrived data.

*Chart is
“Encounters by
day”*

Red Boxes/X's/etc indicate "Alerts" sent to DQ Team via automated email

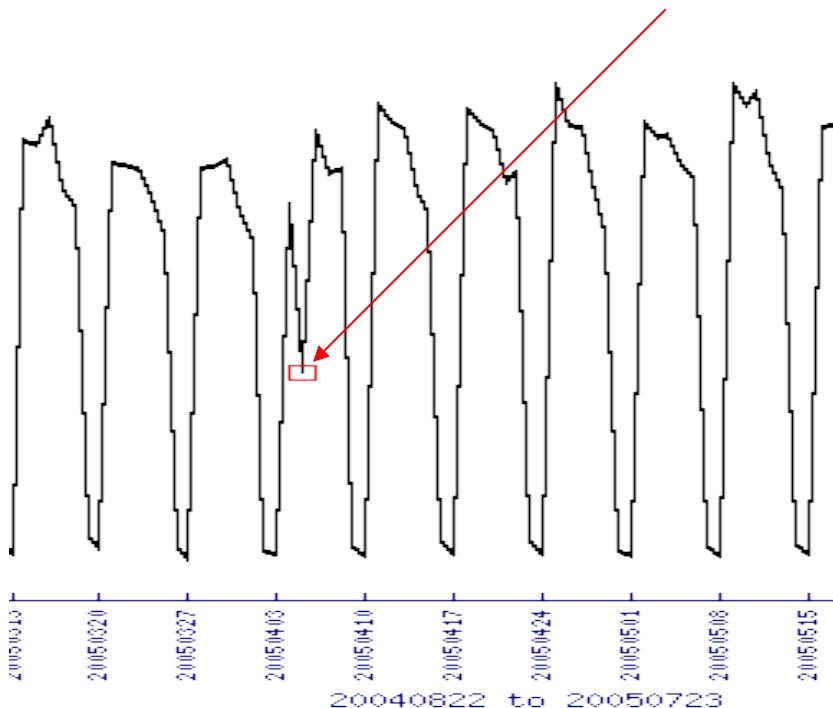

Identifying Data Completeness Problems

Red Boxes/X's/etc indicate "Alerts" sent to DQ Team via automated email

- **An Alerting and Notification Issue**

- How do you identify and present "possible" problems?
 - When the "problem" is transient
 - When it is one data point in a series
 - From one of a vast number of input data sources daily

Essentially a projection of previous data forward in time to today, then a comparison of this projection with the newly arrived data.

Soon to be a Data Tracker Report Series including

- SADR vs Appointment Tracking** (a “Real Time” Hutchinson Report, such as this example)
- SADR vs Appointment Delta Alerting**

The HL7 Weekly Tracker - Sorted by Service: Is posted on the EIDS Web site and updated weekly. Uses data generated from the Data Tracker Database.

Operations Data Quality Tools

These tools and procedures allow EIDS to:

- **Catalogue data files**
- **Monitor data completeness**
- **Provide metrics to assess Data Quality/Completeness of data received**
- **Utilize DQ Software to provide event driven alerting and reporting**

"A thousand miles can lead so many ways...Just to know who is driving what a help it would be...we found our driver."

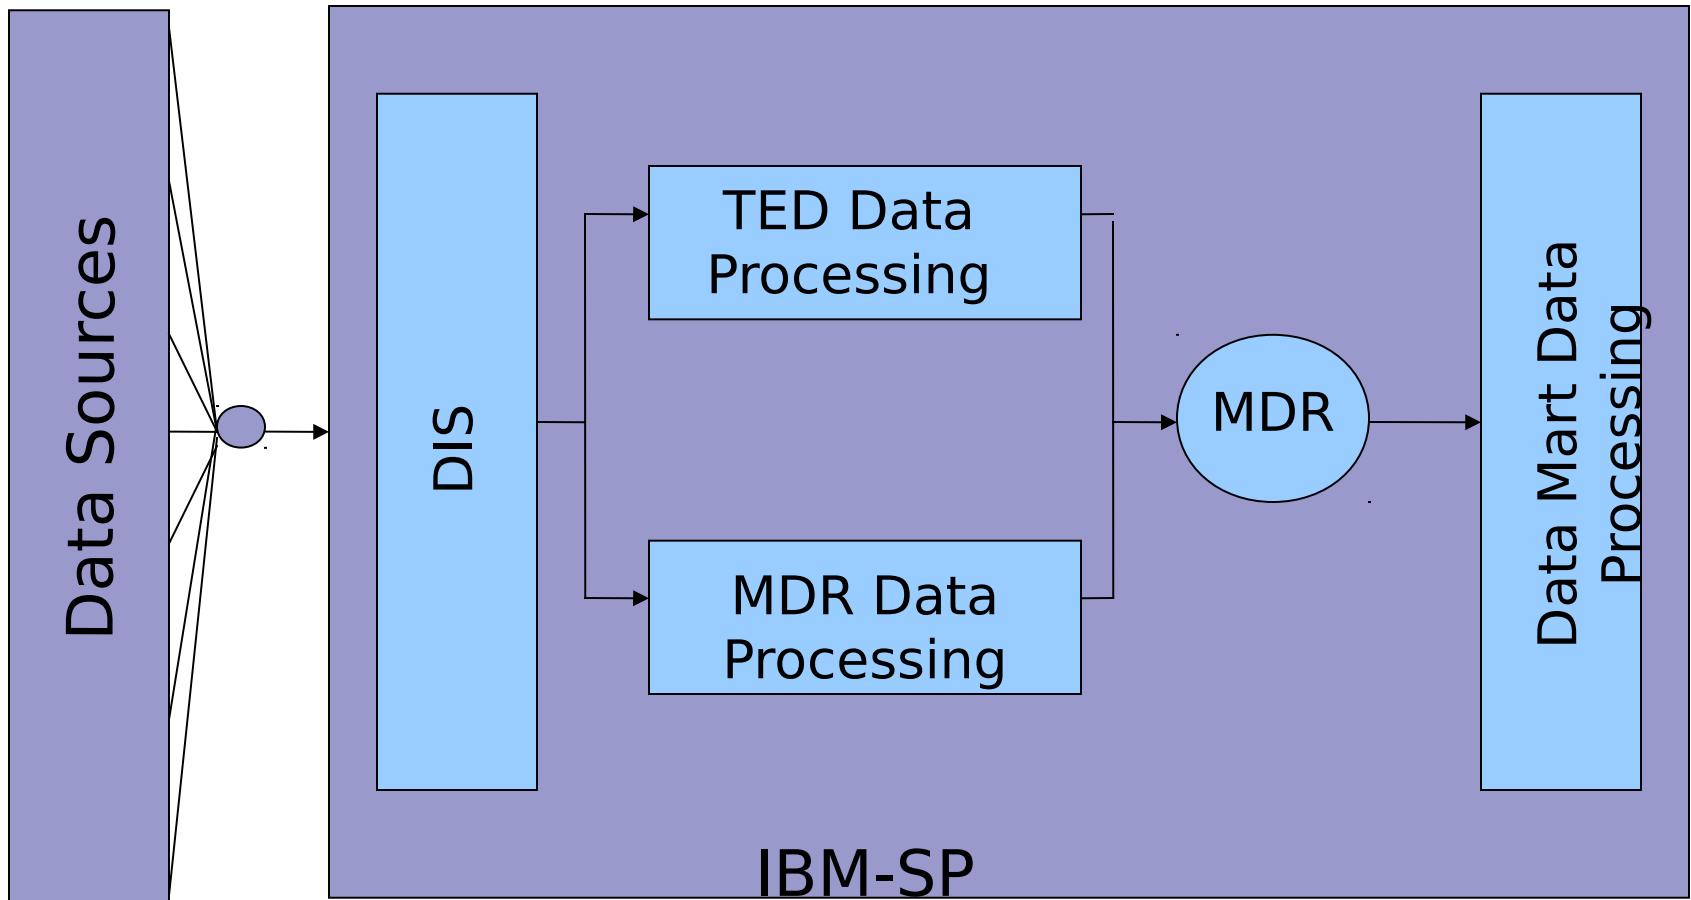

Data Quality through Software

- Data Quality
- Context
- Data Ingest Scripts (DIS)
- Operations
- MDR

Data Quality

- Accuracy: is it free from error?
- Completeness: is it whole?
- Consistency: is it free from contradiction?
- Integrity: is it secure?
- Relatability: is it rationally correlated?
- Relevancy: is it appropriate?
- Timeliness: is it available when needed?
- Uniqueness: is it sole?
- Validity: is it sound?

Context

DIS

- Feed node scripts
- Preprocessors
 - Ancillary
 - Appointment
 - SADR
 - SIDR

Feed Node Scripts

- Decompress and decrypt
- Archive
- Correct location and ownership
- Copy for other real-time systems
- Inspect
 - File structure
 - Content of key fields
- Report

Preprocessors

- Reject bad records
 - Bad format
 - Invalid key fields
 - Currently no major edits
- Batch by week or month
 - Maintain record of contributing source files
 - Provide counts for reconciliation
- Transfer for MDR processing
 - Fully automated
 - Predefined schedule

DIS and Quality

	Accuracy	Completeness	Consistency	Integrity	Relatability	Relevancy	Timeliness	Uniqueness	Validity
Feed node scripts	X	X	X	X	X	X	X	X	X
Preprocessors	X	X	X	X	X	X	X	X	X

Operations

- Data management
 - Data tracker
 - Ad hoc scripts
- Systems management
 - Query monitor
 - Systems monitoring

Data Tracker

- Store data on source files and records
- Identify unique records
- Track data by date
- Check data against source metadata
- Compare multiple data types
- Create x-bar control charts
- Provide daily reporting

Ad Hoc Scripts

- Identify source files sent in clear text
- Track corrections in source systems

Query Monitor

- Display query activity
- Identify performance issues
- Report access to PHI

System Monitoring

- Record and display system utilization
 - CPU and memory
 - IP connections
 - Tape drives
 - User activity

Operations and Quality

MDR

- Processors
- Processing utilities
- Access control script
- Metadata catalog

Processors

- Parse raw records
- Filter data
- Merge and de-duplicate with master data
- Derive standardized values
- Enhance with reference data
 - Enrollment
 - Facilities
 - Identity
 - Market areas
- Create feeds for data marts

Processing Utilities

- Apply common functional logic
- Manage processor jobs
 - Before execution
 - Calculate disk requirements
 - Check disk and tape resources
 - After execution
 - Document all inputs, references, and outputs
 - Check logs for errors and PHI
 - Extract counts and frequencies
 - Create metadata

Access Control Script

- Detect new files
- Examine and enforce file attributes
 - Ownership
 - Permissions
 - Access control lists

Metadata Catalog

- Store MDR metadata
- Track history of MDR files
- Audit MDR files
- Populate missing metadata
 - Size
 - Records
 - Format

MDR and Quality

	Accuracy	Completeness	Consistency	Integrity	Relatability	Relevancy	Timeliness	Uniqueness	Validity
Processors	X	X	X	X	X	X	X	X	X
Processing utilities		X				X	X		X
Access control script			X						
Metadata catalog					X	X	X	X	X

EI/DS Captured Data

- Customer Satisfaction Survey Data
- DEERS Point-in-Time Extract (PITE) - Eligible Beneficiaries
- Expense Assignment System IV (EAS IV)
- Health Care Provider Record (HCPR)
- Health Care Service Record (HCSR) Institutional Claims
- Health Care Service Record (HCSR) Professional Claims
- Health Level 7 (HL-7)
- Non-Availability Statements (NAS)
- Pharmacy Data Transaction Service (PDTS)
- Standard Ambulatory Data Record (SADR)
- Standard Inpatient Data Record (SIDR)
- TRICARE Encounter Data (TED) Claims
- TRICARE Enrollment File
- Worldwide Workload Report

EI/DS: Did you know...?

The MCFAS Beneficiary Population Forecasting Model is a powerful MHS application for analyzing and forecasting beneficiary demographics. Variations in age, gender, locality, and beneficiary entitlement status can be tracked and projected over an 8-year planning horizon.

Dates to Remember

- TRICARE Conference - 24 Jan 2005
- HIMSS Conference - 13 Feb 2005
